Securities Lending Overview

Securities Lending Market Update

Equity Markets:

- U.S. equities staged a risk-on rally in Q2 2026, led by AI and semiconductors, as investors shrugged off geopolitical risk and inflation concerns. Borrower demand remained concentrated in several key themes, notably artificial intelligence (AI) related shorts as investors targeted equities tied to both semiconductors and infrastructure support for the AI ecosystem. Demand was further supported by IPO lock-up expirations, event-driven activity, and index ETF rebalances, creating several crowded short positions.
- U.S. equity revenue in Q2 fell 16% year over year to $1.02 B as lower fee spreads (down 40%) were offset by a 42% increase in average value on loan[1].
- APAC Q2 equity lending revenues surged 99% year over year to $1.45 B[1] driven by AI themes, semiconductor supply chains, IPOs and directional trading in certain Asian markets. APAC overtook U.S. equity as the leading revenue producing region, with activity concentrated in high-demand names.
- EMEA Q2 equity lending revenues grew 56% year over year to $625 M[1], with all major European markets positive.

Fixed Income Markets:

- Corporate bond Q2 lending revenues reached $290 M globally (+13% year over year), driven by a 16% loan balance increase[1]. Demand was broad-based, with collateral-upgrade and financing-driven activity as the main drivers and directional high yield shorts lifting revenue. Borrower demand for certain fixed income ETFs reflected credit-hedging activity, while quarter-end balance sheet constraints reduced balances.
- U.S. government securities performed well in Q2 2026. Funding conditions remained stable and general collateral rates stayed in a tight range. Specials were muted overall, though a few issues traded at elevated spreads supported by rate uncertainty and sustained demand for high-quality liquid assets. Overall, lending revenues on Americas Government Bonds in Q2 reached $477 M for the quarter which was up 44% year over year[1].

TSP Securities Lending Commentary

For the year ending June 30, 2026

Reinvestment:

- The G Fund offered limited yield pick-up compared to overnight rates from July 2025 until the Federal Reserve cut overnight interest rates at the October/December meetings. Beginning in January, long dated yields began to diverge higher from overnight rates, providing incremental G Fund yield as compared to overnight rates, and resulting in additional lending opportunities and meaningful reinvestment income. March 2026 provided a brief pullback in longer dated yields, before further and sustained widening during Q2 2026.

C Fund:

- While lending volumes increased, low reinvestment spreads for most of 2025 limited the increases in lending revenue in the second half of calendar 2025 as compared to the prior year. In the 1st half of 2026, reinvestment spreads widened substantially, increasing opportunities for lending general collateral, driving up both utilization and revenue. Overall, for the period 7/1/2025 to 6/30/2026, the C Fund utilization increased 120% and revenue increased 839% on a year over year basis.

S Fund:

- The S Fund continued as the strongest performer for FRTIB due to the more consistent demand for small cap stocks in its portfolio. It experienced the largest notional increase in earnings, but due to substantial prior year earnings, and a large portion of incremental general collateral equities on loan driving down the average demand spread, the reinvestment spread increase had a lower proportional effect on revenues. Overall, the S Fund utilization increased by 72% and revenue increased 69% on a year over year basis.
- There was strong borrower demand for securities from a broad spectrum of industries including biotechnology, information technology, and electric vehicles, etc. Some key earners included Cassava Sciences Inc. Coreweave Inc., Lucid Group, Kodiak AI, Brand Engagement Inc, and Sellas Life Sciences Group Inc.

TSP Securities Lending Commentary

For the year ending June 30, 2026

F Fund:

- Lending volumes in the F Fund were materially impacted by the reinvestment spread widening. During the 2nd half of calendar 2025, lending remained muted and concentrated in corporate bonds and US Government securities trading special. With expanded reinvestment spreads in the 1st half of 2026, both lending volumes and revenues expanded dramatically. Overall, for the period 7/1/2025 to 6/30/2026, the F Fund utilization increased by 750% and revenue increased 1,493% on a year over year basis.

I Fund:

- The transition of the Index benchmark for the I Fund during the latter part of 2024 has continued to have a positive impact on securities lending revenue. The introduction of certain emerging markets and small cap international equities has bolstered lending opportunities, particularly in Asian emerging markets where demand is high. However, the prevalence of non-cash collateral in these markets means the reinvestment spread widening has had a lower impact.
- Lending equities in Taiwan has meaningfully contributed to revenue generation for the fund.
- Overall, for the period 7/1/2025 to 6/30/2026, the I Fund utilization increased by 45% and revenue increased 100% on a year over year basis.

Generally, among asset classes, stocks are more volatile than bonds or short-term instruments. Government bonds and corporate bonds generally have more moderate short-term price fluctuations than stocks, but provide lower potential long-term returns. U.S. Treasury Bills maintain a stable value if held to maturity, but returns are generally only slightly above the inflation rate.

Securities lending programs and the subsequent reinvestment of the posted collateral are subject to a number of risks, including the risk that the value of the investments held in the collateral may decline in value and may at any point be worth less than the original cost of that investment.

Diversification does not ensure a profit or guarantee against loss.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise bond prices usually fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed-income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

Passively managed funds invest by sampling the index, holding a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of market stress.

Important disclosures

Equity securities may fluctuate in value and can decline significantly in response to the activities of individual companies and general market and economic conditions.

Returns on investments in stocks of large U.S. companies could trail the returns on investments in stocks of smaller and mid-sized companies.

Narrowly focused investments and investments in technology stocks may involve greater risk of capital loss and higher price volatility.

Investing in foreign domiciled securities may involve risk of capital loss from unfavorable fluctuation in currency values, withholding taxes, from differences in generally accepted accounting principles or from economic or political instability in other nations. Investments in emerging or developing markets may be more volatile and less liquid than investing in developed markets and may involve exposure to economic structures that are generally less diverse and mature and to political systems which have less stability than those of more developed countries.

SSGA generally delegates commodities management for separately managed accounts to SSGA FM, a wholly owned subsidiary of State Street and an affiliate of SSGA. SSGA FM is registered as a commodity trading advisor ("CTA") with the Commodity Futures Trading Commission and National Futures Association.

Appendix B: Biographies

Biographies

Anna Paglia

Anna Paglia is executive vice president and chief business officer for State Street Investment Management. As chief business officer, she is responsible for developing long-term growth strategies for its major businesses across global ETFs, index, cash and defined contribution; increasing the firm's overall competitive positioning; and delivering investment exposures and tailored solutions to its clients. Anna is also a member of State Street Investment Management's Executive Management Group.

Prior to joining State Street Investment Management in 2024, Anna was Managing Director, Global Head of ETFs, Indexed Strategies, SMAs and Models at Invesco Ltd. In this role, she was responsible for managing the operations and setting forth the global growth and commercialization strategy for Invesco's ETFs and indexed business. Before joining Invesco, Anna was a partner in the investment management group at K&L Gates LLP and served as fund counsel and counsel to the independent directors for a number of mutual funds and ETFs. Prior to K&L Gates LLP, she was in-house counsel at Barclays Global Investors in London, where she contributed to the European expansion and cross-listings of the iShares ETFs.

Anna has provided thought leadership to the ETF industry since 2000 and has worked toward ETF innovation in both Europe and the United States.

Anna earned a Juris Doctor from L.U.I.S.S. Law School in Rome, a law school certificate from Kingston University School of Law in London, and a Master of Laws from Northwestern University School of Law in Chicago. She is admitted to practice law in Illinois and New York.
